

Support The Hobby

I would like to point out to the News Brief readers that there are a number of organizations taking on the challenge against various types of legislation dealing with metal detecting and gold prospecting. MDHTALK's recommendation is to visit their website and give strong consideration to joining the fight. In some cases your support may be to send emails and / or write a letter to specific legislators or to provide funds to help with the fight. Here are the organizations and a link to their website.

What is a News Brief? The news brief provides a brief look into any news event. The intent of the news brief is to provide you, the reader, with news clips on what was taking place in the hobby last month. To read the whole story select the Article Link or go to [MDHTALK.org](#). There are more news stories placed on the MDHTALK website for March the news stories listed in the MDHTALK News Brief are just a portion of all the hobby related news reported the past month. **The news Brief is now available in Adobe PDF format, there is a link at the top of this webpage.** The news brief is no longer emailed; it is only available on the MDHTALK website and can be downloaded.

- MDHTALK Event Calendar
- April

- I was told in a gruff kind of way by a parks and recreation worker to leave the park, that all parks in city were being banned to metal detecting. The park employee said someone in the past had created holes in the park ground while metal detecting and the city had banned future use of metal detectors.
- I was told last year by a park worker that I could not metal detect in their part. But I had called the park director before I went and he told me it was ok. I told the park employee that if he didn't believe me call the park director. He then said ok.
- I was told that metal detectors may be used on DNR land or waters only for locating specific lost personal items. A special permit is required.
- I was camping at my favorite state park for a few days. I went metal detecting and pulled up a lot of clad, on the 2nd day I was just filling a hole when one of the rangers came up. He asked me what I found, I showed him, he took a pause and asked if I had the park managers permission to metal detect. I know the rules, I read everything about metal detecting state parks. I have been metal detecting this park every summer for years. I said I did not and he took another pause and said that he would consider giving me permission to metal detect there but only at the beach. The next day I looked in the park store and there was a sign posted on the door that read "Metal Detecting is Prohibited in this State Park and Legal Action Will Be Taken."
- I was detecting for about a half hour when a police officer walked up and exchanged pleasantries. I said I was just detecting for a few coins. The officer said, "I know I've been watching you for a while, and I like what I saw. You made two trips to the trash can and I can't tell where you have been digging. Just wanted to say thanks, and keep doing what you are doing. The problem is that someone from the Parks and Recreation Program may run you off. They don't even allow tent pegs in the ground." About a half hour later the Parks and Recreation guy shows up and I was tossed out of the park.
- People will call the police on you just for having a detector. You have not broken any laws or dug any unsightly holes. You are just enjoying the hobby. The cops come over and usually say you need to leave or just move along. Sometimes the police are open to metal detecting and after a few questions leave you alone. However, if a park ranger comes to check out the complaint be prepared to leave immediately or get a ticket

These comments are because almost every state, county, city, and town have rules / regulations that create comments like those above and these rules / regulations put restrictions on metal detecting which result in banning.

Metal Detecting Early Years

A very early Federal act [AAA-American Antiquities Act of 1906](#) is a very broad Federal law that addressed historical sites. However, it had little to no impact on metal detecting before the ARPA act in 1979.

In the early years, 1950s - 1980s, there were few detectorists in the hobby and no local or state laws against metal detecting. The hobby was pretty much a user's choice of where and how to practice metal detecting on most public lands.

How Did Change in Law and Attitude Come About?

The change in attitude towards metal detecting started to take place with the passing of the Federal [ARPA-Archaeological Resources Protection Act of 1979](#). This act set the stage for the establishment of federal, state and local agencies to identify and define archaeological sites as protected and making these sites off limits to many people related activities including the hobby of metal detecting.

The Federal [NHPA-National Historic Preservation Act of 1966 as amended in 2000](#) was passed before the ARPA-Archaeological Resources Protection Act. The 1966 Act set in motion the requirements to identify structures and surrounding grounds that could be or are of historical significances and should be protected for future generations of Americans.

Following are two major Federal acts were passed after ARPA:

- [1990 Native American Graves Protection,](#)
- [1996 American Battlefield Protection Act.](#)

Each of these acts are more specific in their protection of certain human remains, lands and sites.

The adoption of these five acts at the Federal Government level put in place the ability for states and local governments to follow suit and either adopt these acts in whole as their state law or to write their own regulations and laws to complement the Federal Acts.

Examples of direct regulations against metal detecting may be worded similar to the following:

- Metal Detectors: No person shall use a metal detector or similar device on parklands, except as provided in a written permit granted by the General Manager of the District.
- It shall be unlawful to use a metal detector or similar device in any District Facility or Parkland without a permit.
- Use of a metal detector in our parks is strictly prohibited.

Examples of indirect regulations that can be applied to make metal detecting illegal may be worded similar to the following:

- Prohibited Activities Defacing or Destruction of Property: No person shall injure, deface, cut out, displace, remove, fill in, raise, destroy, excavate, tamper, or create any disturbance to property contained within the Park whether it be natural or manmade.
- No artifact or any other organic or inorganic material may be removed from any historical area of the park.
- No artifact or any other organic or inorganic material may be removed from any area of the park, via metal detecting or any other form of excavation.
- It is our goal to provide as many positive recreational opportunities for park visitors as possible, and the use of metal detectors, or "treasure hunting," in the park system is not illegal. City code does not prohibit it however, it is our obligation to protect the park's resources and to ensure that damage to the park by visitors is minimized, and it is illegal to dig in any park area with any tool. Violators are subject to citation.

With this concept in mind, park visitors with metal detectors are welcome in the parks so long as they do not do any digging. Park staff have been directed to politely ask treasure hunters to leave all digging tools outside of the park and to inform them that sifting through the top few inches of sand or fir bark in play areas is acceptable so long as they do not use any tools or inconvenience playground users. The City is, in fact, grateful for any assistance treasure hunters might render with regard to the removal of any trash or debris they might find during their hunt.

- Treasure hunters observed digging in the park or otherwise damaging park resources will be informed that they are breaking the law. If they continue to break the law, park staff will contact Public Safety.

Today's Metal Detecting Situation:

Today, the result of these five Federal acts is that more and more local cities, towns, schools and counties are closing their public land to metal detecting. The type of regulation that is being put in place against metal detecting can be either directly related or indirectly related to the metal detecting hobby.

Since the adoption of the ARPA-Archaeological Resources Protection Act of 1979 archaeologist have been hired at almost all levels of government to identify archaeological sites and to get regulations and laws passed to protect archaeological sites. During the past 20 years this has taken place at a rapid rate in the U.S. Archaeologist have also contributed to a negative attitude toward detectorist that has permeated all levels of government and the public at large.

Keep in mind that metal detecting hobbyist do not have a voice in Federal or State governments. There is not a strong metal detecting association in the U.S. that can represent metal detectorists. However, there have been cases of hobby support by local metal detecting clubs in some communities. This is rare but it does happen.

Another contributing factor is that many detectorists do not practice good target recovery methods on public grounds. This has caused many cities, towns and counties to create laws or regulations that impact metal detecting on non-related archaeology sites. (parks and beaches in general)

Never bring shovels, spades or any digging tool that should only be used in a garden to recover a coin target in a park.

Tools of the trade to recover a coin target are: 10 inch- ¼ inch shaft screw driver, 6-to-8-inch knife, a drop cloth and an electronic pin pointer.

Also carry a bag or apron where you can place trash that is recovered while metal detecting.

What Can Be Done?

Manufacturers, distributors and dealers must step-up and provide hands on training for every new detector sold before it is taken into possession much like when you purchase a fire arm. In most states to purchase a fire arm you must first go to a class on safe and proper operation. Strong manufacture involvement is a requirement not just a pamphlet but hands on how to practice the hobby correctly and safely. Individuals who metal detect must take ownership for their behavior and practice [Responsible Metal Detecting](#) while out detecting.

Responsible Metal Detecting is to:

- Know and Follow the Law.
- Gain Permission.
- Apply the Metal Detecting Code of Ethics.
- Join a Metal Detecting Club and National Metal Detecting Association.
- Understand the Potential Cultural Value of Your Find.
- Volunteer Your Services to the Hobby.

Here are links to a self-certification metal detecting class:

- [Metal Detecting 101](#)
- [Metal Detecting 102](#)
- [Metal Detecting 103](#)

These small steps will not do away or improve the [current metal detecting environment](#) in the U.S. but may slow the change that is currently taking place which is to eliminate the use of metal detectors on public property.

Event News

Metal Detecting & Gold Prospecting Events.

Now is the time to start planning and getting your club's 2021 hunt information on the web. The sooner it is out and available to the metal detecting community the greater the chance for people to see it and give your event some consideration.

- **April 02, 2021** (Three Days)
Stanton, Arizona
2021 Backhol Push Dig at Stanton
LDMA-Lost Dutchman Mining Assn
- **April 08, 2021** (Four days)
Vein Mountain, North Carolina
2021 Detector Hunt at Vein Mountain
LDMA-Lost Dutchman Mining Assn
- **April 17, 2021** (Two Days)
Deal, New Jersey
The Big Deal Hunt
ECRDA, SIHH, DSMDC-Task Force for Metal
Detecting Rights Foundation
- **April 20, 2021** (Five Day)
Marlborough, New Hampshire
BONE #28 Streeter's Treasure Hunting
